

Project Documentation: Hatid-Agad

1. Project Overview

Project Name: Hatid-Agad

Purpose: A logistics and marketplace application designed to facilitate secure and efficient delivery services for students. The system aligns with **SDG 8** (promoting sustainable, inclusive economic growth and productive employment) and **SDG 11** (creating sustainable, safe, and resilient campus communities by optimizing local logistics and transportation). .

Core Features:

- **Marketplace Management:** Allows users to view products, prices, and availability status.
- **Order Tracking:** A centralized system to monitor delivery status and passcodes for secure order fulfillment.
- **User Roles:** A secure login system distinguishing between different user roles to maintain database integrity.
- **Rating System:** Enables feedback on delivery/runner performance to maintain service quality.

2. System Architecture

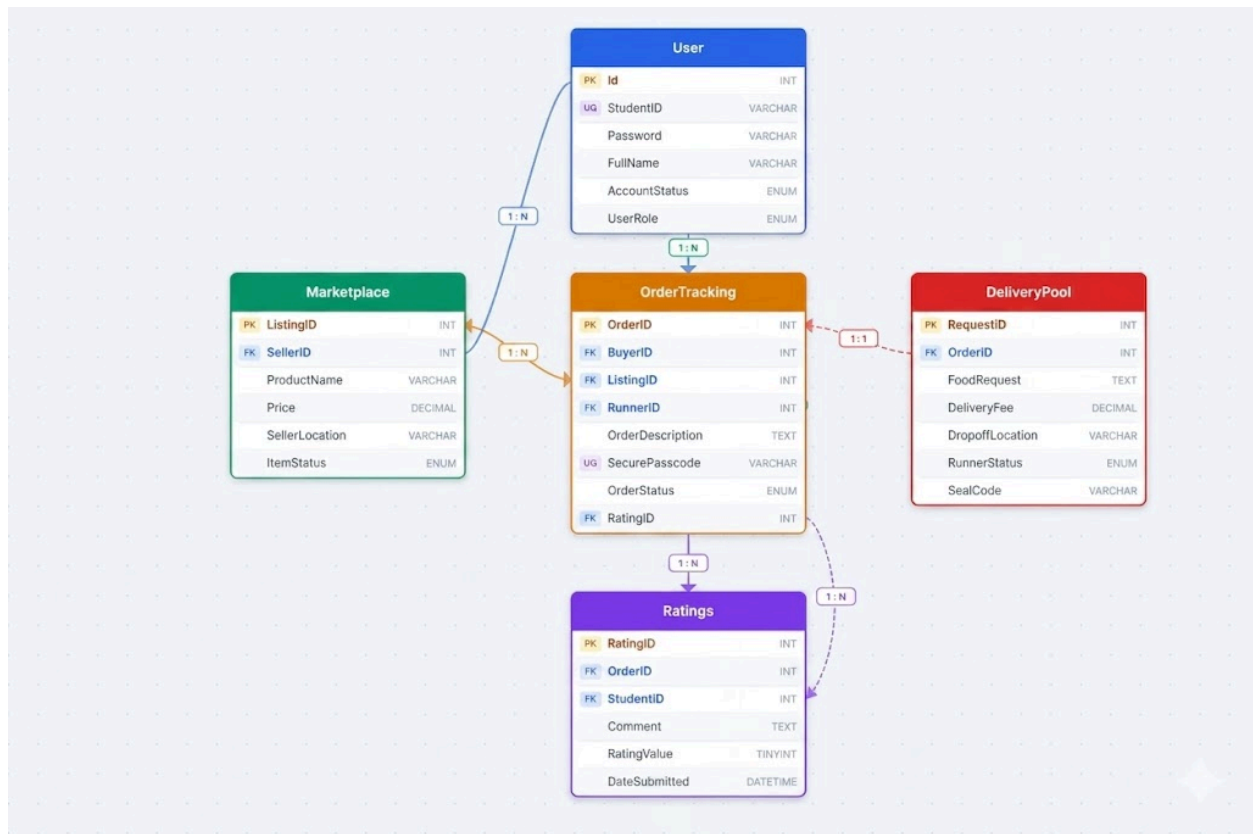

Component	Technology	Description
Frontend/Logic	VB.NET	Handles user interface, input validation, and business logic.
Database	SQL Server	Stores data for users, marketplace items, orders, and ratings.
Connectivity	ADO.NET	Facilitates communication between the VB.NET application and the SQL database.

3. User Manual

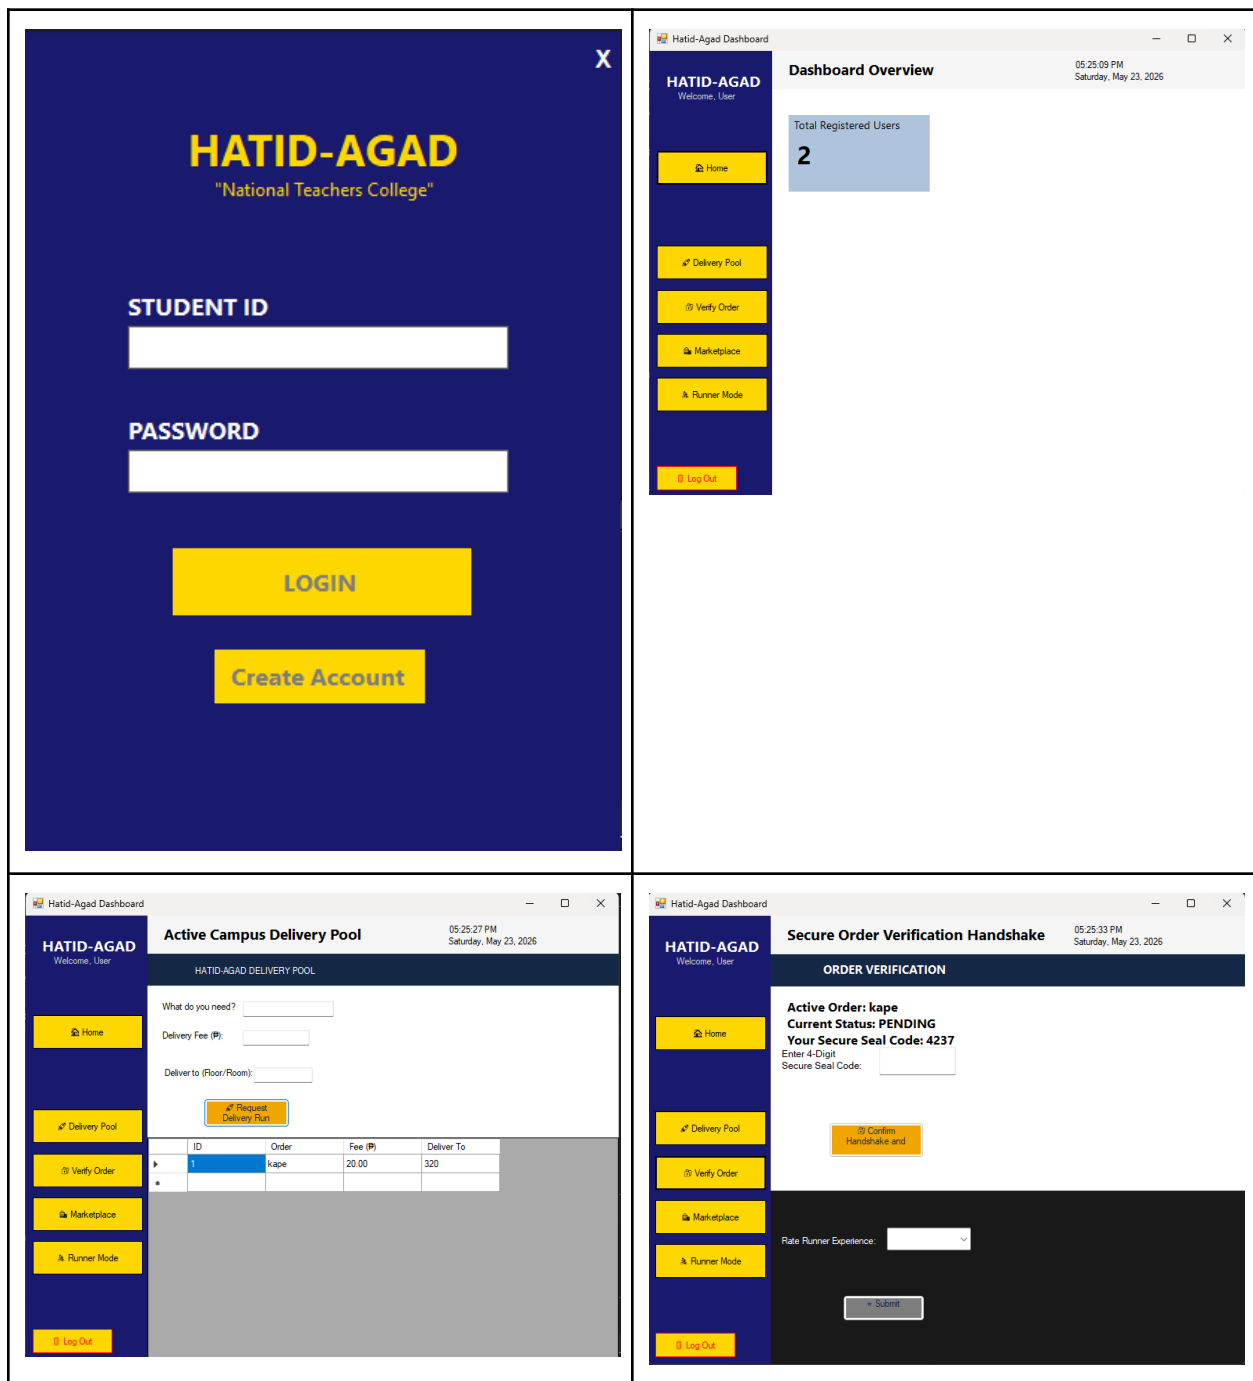

Getting Started

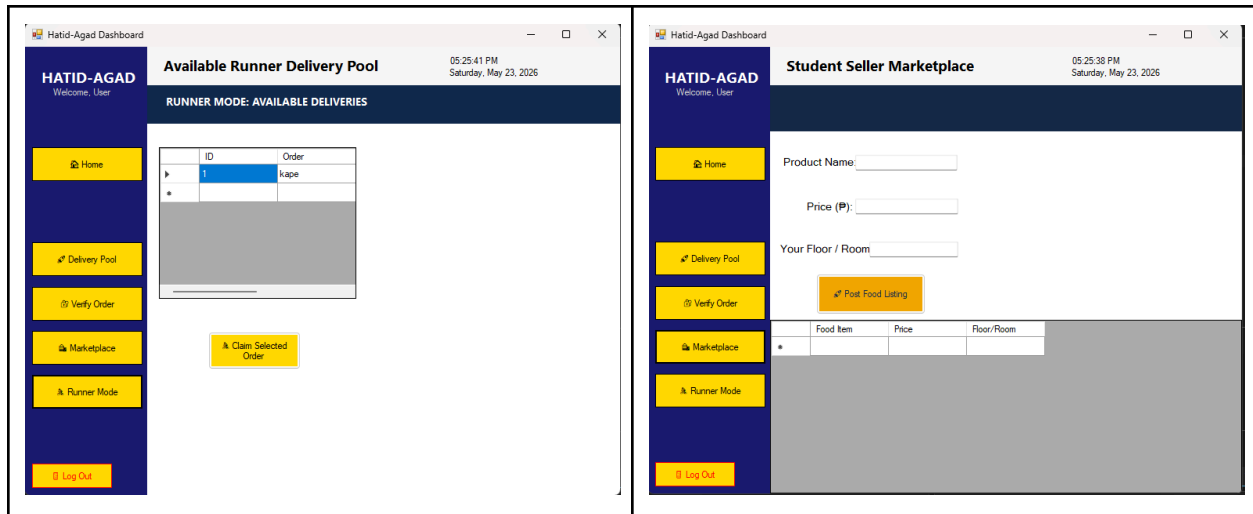

1. **Login:** Launch the application and enter your Student ID and password.
 2. **Marketplace:** Browse available items, view seller locations, and check item status.
 3. **Order Tracking:** Monitor your active deliveries using the OrderTracking feature with your secure passcodes.
 4. **Ratings:** Provide feedback on your transactions to help maintain service quality.
- For technical support or issues regarding your account, please contact the system administrator.*
